

G ROL

Roller shutter made of special, high standard polycarbonate material

reinforced with interior metal rods.

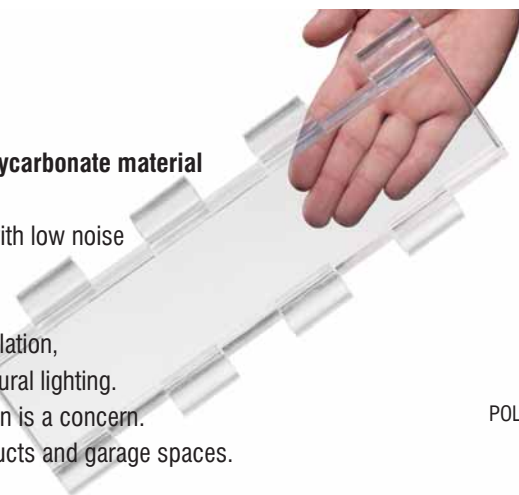

It combines high strength and security standards with low noise during operation and perfect finishing.

Contrary to open type roller shutters, it offers:

Protection against ultraviolet radiation, thermal insulation, high transparency percentage and ability to use natural lighting.

It is recommended for coastal areas where oxidation is a concern.

Ideal for retail stores wishing to promote their products and garage spaces.

PROFILE:
POLYCARBONATE

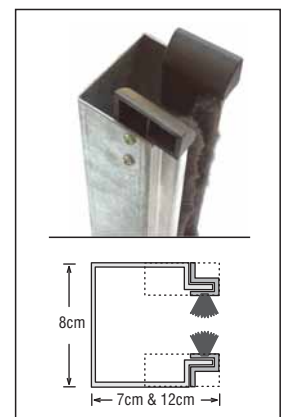

DIMENSION:
30 cm

The profiles are connected to each other and reinforced by means of internal metal rods.

The last profile (endplate) is specially reinforced for higher strength. Also, a special elastomer PVC strip is attached for enhanced sealing.

Guide made of 1,5 - 2mm thick, "Q" shaped galvanized steel that works together with a special aluminum profile and brush strip to reduce friction and noise.
